

Velocity® TLB-6700

Wide and Fine Tunable
External Cavity Diode Laser

mks | Spectra-Physics®

New Focus™ tunable external cavity diodes lasers lead the market with high performance, delivering true continuous mode-hop-free tuning over wide wavelength ranges. The Velocity TLB-6700 is our premier tunable diode laser system offering both wide and fine wavelength scanning. The laser cavity housing is shock proof, thermally insulated with active temperature control, and incorporates our unique magnetic damping technology to provide higher power, stability, and narrow linewidths.

The fiber coupled option includes a robust, permanently fixed fiber port for optimal coupling efficiency maintained across the wavelength tuning range. Both the isolator and fiber coupling are integrated within the laser housing to ensure the highest power stability.

The Velocity is operated using the TLB-6700-LN controller designed with low-noise analog circuits. The laser head is recognized upon startup, and optimum temperature, maximum current limit, and tuning range are automatically set. Current limits and safety shutoff features ensure maximum diode lifetime.

Integrated wavelength monitoring allows adjustment to within 0.01 nm, and piezo fine tuning provides even finer sub-picometer precision. External control and frequency locking are possible via analog input ports, and operation in both manual and remotely programmed modes is accessed via a USB interface.

The Velocity TLB-6700 Advantage

- True mode-hop-free wide tuning
- Exceptional stability with shock-proof and thermally insulated housing and magnetic damping technology
- Fiber coupled option with robust, permanent fiber coupling
- Easy-to-use wavelength control

Applications

- Spectroscopy
- Micro-cavity resonators
- Quantum dots

Velocity TLB-6700 Specifications¹

	Value
Linewidth	<200 kHz (50 ms integration time) < 2.5 kHz (5 μ s)
Wavelength Stability	2 pm (over 1 hour $\pm 2^\circ\text{C}$)
Power Stability	<1% (over 1 hour $\pm 2^\circ\text{C}$)
Wide Tuning Resolution	10 pm
Fine Tuning Resolution ³	0.01% of full PZT tuning range
Fine-Frequency Modulation Bandwidth	>100 Hz (100% amplitude) 2 kHz (20% amplitude)
Current Modulation Bandwidth	DC-1 MHz (through controller) 50 kHz-100 MHz (directly to diode) ⁴
Longitudinal Mode	Single
Transverse Mode	TEM ₀₀
Beam Pointing Stability	<50 μ rad ($\pm 2^\circ\text{C}$)
Beam Size, typical	1–2 mm
Beam Ellipticity, typical	1:1–2:1
Polarization ⁵	Vertical
Optical Output ⁶	Free-space, optically-isolated, fiber-coupled
User Interface	Controller front panel, USB
Power Supply Requirement	100–240 VAC (50-60 Hz), power consumption <170 W
Environment Temperature, operating	15–30 $^\circ\text{C}$
Environment Temperature, storage	0–50 $^\circ\text{C}$
Environment Humidity	Non-condensing

1. Due to our continuous product improvement program, specifications are subject to change without notice.
2. Motorized wide tuning and PZT fine tuning. Contact us for other available wavelengths and typical tuning curves. Wide tuning is mode-hop-free in constant current mode only.
3. Resolution is 10 mV in PZT (0.01% of full PZT tuning range) through controller front panel or command interface. When tuning PZT using an external voltage source through External Frequency Modulation input, resolution is dependent on voltage source.
4. Current modulation directly to diode through laser head SMA port.
5. Free space (with and without isolator) output is vertically linearly polarized with respect to laser head base.
6. Optically-isolated option includes an integrated 35 dB optical isolator for free-space output with approximately 75% power transmission. Fiber-coupled option includes isolator and permanently fixed Panda-type PM fiber with FC/APC connector for laser output. Wide-type alignment key aligned with the slow axis of the PM fiber. Dual stage isolation, other fiber types and connectors available upon request. Optically-isolated option for TLB-6732 available upon request. Fiber coupled option for TLB-6732, TLB-6736, and TLB-6740 available upon request.

Heterodyne beat note of two Velocity TLB-6712 lasers, 50 ms integration. Deconvoluted linewidth <200kHz¹
