The InSight X3+ and InSight X3 are built on Spectra-Physics’ industry leading InSight platform. Designed for maximum performance and reliability, the InSight X3+ delivers high powers across the tuning range for brighter signals and increased imaging depths. The InSight X3+ and InSight X3 lasers have the largest installed base in the market. As a result, researchers have generated more than 1,000 peer-reviewed publications.

The InSight platform is designed for advanced multiphoton microscopy in neuroscience, immunology, and other biological sciences. Based on patented technology¹, InSight features a broad, gap free tuning curve that spans 680 nm to 1300 nm; nearly doubling the wavelength coverage of legacy Ti:Sapphire lasers. The InSight tuning curve peaks in the 900 to 1100 nm region to excite the most common green and red fluorophores including GFP, RFP, GCaMP, jRGECO, and mCherry. The InSight X3+ provides higher powers at the longest wavelengths between 1280–1300 nm for excitation of far red fluorophores.

With Spectra-Physics’ integrated and patented DeepSee™ dispersion pre-compensation module, short femtosecond pulses are optimally delivered through the microscope to provide maximum fluorescence and penetration depth. The InSight has exceptional beam pointing stability, beam quality, output power stability and noise, with fast wavelength tuning. When equipped with the fixed 1045 nm dual beam option, the InSight platform fully supports the diverse needs of multimodal imaging. The two synchronized output beams enable simultaneous imaging of various fluorescence proteins, genetically encoded calcium indicators, second and third harmonic generation, and advanced imaging techniques such as CARS and SRS.

The InSight Advantage

- Field proven with the largest installed base in the market
- High reliability with >1,000 peer-reviewed publications
- Broad tuning range (680–1300 nm) for maximum flexibility
- Highest peak power for maximum fluorescence
- Dual output at 1045 nm with optional precompensation
- Short pulses using integrated DeepSee™ precompensation

Applications

- Multiphoton Imaging
- Stimulated Raman spectroscopy (SRS)
- Optogenetics
- Non-linear spectroscopy
- Coherent anti-stokes Raman Spectroscopy (CARS)

1. Due to our continuous improvement program, specifications may change without notice.
2. Specification applies to 900 nm (tunable) output.
3. A sech\(^2\) pulse shape is used to determine the pulse width as measured with a Newport PulseScout® autocorrelator.
4. Specification represents rms noise measured in a 10 Hz to 10 MHz bandwidth.
5. Maximum deviation across the entire tuning range and precompensation dispersion range.
6. Averaged over entire tuning range.
7. Percent power drift in any 2-hour period with less than ±1°C temperature change after a 1-hour warm up.
8. InSight X3+ and InSight X3 are Class IV – High-Power Lasers, whose beams are, by definition, safety and fire hazards. Take precautions to prevent exposure to direct and reflected beams. Diffuse as well as specular reflections can cause severe skin or eye damage.
